Overview

One of the primary functions of **YuniquePLM™** is to create organized folders for new product data, otherwise known as a Style Folder. Styles could be any product category that is planned and developed for either a retail or wholesale chain. A Style Folder contains all of the detailed information or workflows related to the product in development. For example, the Style Folder contains all of the information related to constructing the product, measuring the product, and even packaging the product for shipping.

The *Style Measurements* multi-workflow page contains the Style's initial sample size measurements for each POM (point of measurement).

Accessing Measurements

- 1. Select the **Style** drop-down arrow within the left-hand navigation bar.
- 2. Click on Style Search to open the Style Folder.
- 3. Locate and select a preferred **style**.

For further Style Folder information, refer to the Style Folder Overview User Guide.

2. The sample size area enters the edit mode so the user can enter the proper values into the sample size column. The treatment data can be entered beforehand to account for fabric behavior. Click the **Save** button at the top of the list to complete the process.

NOTE: This area may contain more or fewer columns to fit the user's needs. This area can be configured by those with Admin permissions, using the **EnableAdvColinMeas** setting within the Admin> Setting> Style> General to show or hide specific columns.

= Spring 202	21 Measu	urements								B () >
🖒 Status: In Pr	ogress / A	ssigned To: Admin 1 / Planne	d End: 7/	12/2019	>					
Fabric Type	РОМ	Description	+Tol	-Tol	Length	Width	Shrink X	Shrink Y	Before Treatment	м
•	CB405	Waistband Height	0.25	-0.25	0	0	0.00	0.00	4.25	4.25
•	CB415	Waistband Width - Extended	0.25	-0.25	0	0	0.00	0.00	12.75	12.75
-	CB440	High Hip Width	0.25	-0.25	0	0	0.00	0.00	13.25	13.25

3. Select a **fabric code** from the *Fabric Type* drop-down, which lists models and fabric codes populated on the *Style Model* page.

Fabric Type	POM	Description	+Tol
M	CB405	Waistband Height	0.25
J	CB415	Waistband Width - Extended	0.25
A11-LADIES-DRESS M	CB440	High Hip Width	0.25

4. Enter expected fabric behavior information for the selected fabric type, within the **Length** and **Width** columns, and enter values of expected shrinkage in the **Shrinkage X** and **Shrinkage Y** columns. For example, the fabric's behavior is expected to shrink in width by 3%, and the pieces will be affected in the direction of the X-axis according to their pattern orientation in the model.

5

Length	Width	Shrink X	Shrink Y
0	0	0.00	0.00
0	0	0.00	0.00
0	0	0.00	0.00
0	0	0.00	0.00
0	0	0.00	0.00
0	0	0.00	0.00

5. Finally, enter the values for the sample size in the last column. The sample size selected for the template is displayed at the top of the column.

6. To save time, use the **F** function keys (**HotKeys**) to enter fractions in all areas where measurement increments can be entered.

Grading Increments

After entering the sample size values, select the *Worksheet* tab available within the *View* area, to view the grading increments for each size. The fully graded size range is viewable in inches by choosing the *Imperial* tab or view the centimeters by selecting the *Metric* tab.

- Add POM(s): Add one to twenty additional POM rows.
- **POM Library:** Select from a list of available POMs.
- Delete POM: Select one or more POM(s) from the list to be removed.
- Link POM to Template: Re-link POMs for previously broken template links.
- Edit Critical POM: Specify which POMs need critical attention.
- Show On QA: Indicate POMs for use on a quality assurance sample request.
- Add POM from Template: Include an additional POM from the template.
- AccuMark Measurement Import: Upload measurements from the Accumark Model Database or manually via text file.
- Refresh Existing Data: Replace newly edited specs with the original POM template values.
- Break POM Link to Template: Break the POM link from the template in the library.
- Change Template: Select a different template.
- Copy Select: Use this feature to copy POMs within the measurement sheet or another style.
- View POM Template: View and modify the POM template from the Control Panel.

POM Library

1. Select the **POM Library** button to add existing POM(s) to the original template.

AccuMark Integration

There are two ways to import the **AccuMark** measurement data, either by direct access to the Measurement database or by importing a text file that contains the data.

Note: A license is required to connect with the **AccuMark** SQL Server Database before you can import any data onto the Measurement page.

1. With the Measurement page in *Edit mode*, select the **menu** icon then click on **Accumark Measurement Import**. An *AccuMark Import* window opens.

DD PO	M(S) -		РОМ	LIBRA	RY	DELETE POM							🖙 🛦 🤮 :

XS-changed			-
S			
м			-
L			
XL			-

The measurements from the text file are calculated as relative or incremental and populate the measurement page. If a matching POM description is already on the page, that row is updated with the new information from the text file. If the point of measure is not on the page and is not in the measurement library, then a new row is added to the page with a code of "ADHOC." Note: *Relative grading: the grading is relative to the sample size. Incremental grading: the grading is the same across sizes, such as ¼ tolerance from each size.*

 Select each tab (Sample, Worksheet, Imperial, and Metric) for various views of these values. If the user would like to restore the original specs entered in the Control Panel for the POM template, click on the menu icon, then press Refresh Existing Data. The newly edited specs are replaced with the original value for the selected POM template.

View POM Template

The POM Template can be viewed and modified from the *View POM Template* link. It serves as a shortcut containing necessary template properties, size class, and size range POM measurements, how to measure details, and the associated image. This is the same as modifying the template from the Control Panel.

Print Preview

1. Press the preview button to view a list of available reports.

2. Select a report from a list of various options. Immediately a notification appears stating the report is in a queue, and a second notification appears upon completion.

3. Click on the notification to view the report in a separate window.

Want a Different Report Language?

Users have the option to change the language of the report. Scroll to the bottom of the *Preview* list and select **Preview Options.** Select a language and a report then
